

Summer 2020: MAPS Statewide Community Advisory Council Creates In-Person Care Partner

Safer Together: The Essential Role of an In-Person Care Partner: The MAPS Statewide Community Advisory Council, now comprised of over 70 community members, recommends healthcare organizations allow for In-Person Care Partners to ensure safe care. The development of an organization's In-Person Care Partner program protects safety through the current COVID-19 pandemic's visitor restrictions, and through future crises that might involve access restrictions to healthcare facilities and congregate care settings.

With support from our MAPS Board of Directors and several MN-based health organizations, we are pleased to release the following, "Safer Together: The Essential Role of an In-Person Care Partner." *Safer Together: The Essential Role of an In-Person Care Partner updated 8_24*

For more information on the Essential Role of an In-Person Care Partner, or to become involved in the MAPS Statewide Community Advisory Council, visit the website.
